

## **ABSTRACT OF THE DISCLOSURE**

A hand-held electric power tool (2) has a switching gear unit (6) which has at least two switching stages, an impact mechanism (10) which can be switched on, and a mode switch (4) with which the switching gear unit (6) can be switched back and forth between the switching stages and the impact mechanism (10) can be switched on and off, the mode switch (4) being movement-coupled with gear unit switching means (16) of the switching gear unit (6) and with impact mechanism switching means (18) of the impact mechanism (10), and with the impact mechanism switching means (18) having a swiveling mechanism which can be swiveled by the mode switch (4) between an active position in which the impact mechanism (10) can be activated, and a passive position in which the impact mechanism (10) is deactivated.
