(54) MULTISCAN DISPLAY DEVICE

(57)Abstract:

PURPOSE: To set parameters in a nonvolatile memory by a user according to an inputted image signal and to display the image signal by using the parameters that the user has set when the same image signal as the mode that the user has set is inputted.

CONSTITUTION: The multiscan display device is equipped with a standard parameter storage means 8 which is previously set at the time of the factory shipment, a parameter input means 7 through which the user inputs user setting parameters, a nonvolatile user setting parameter storage means 9 which stores the user setting parameters, and a CPU 5 having a retrieval means which retrieves parameters matching the inputted image signal from the standard parameter storage means 8 and user setting parameter storage means 9 and a control means which controls a display of the image signal on the basis of the retrieved parameters internally as programs.
