## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 1-17 renumbered as claims 1, 2, 8, 3, 11, 5, 4, 14, 6, 9, 12, 15, 7, 10, 13, 16, 17 respectively are allowed.
2. The following is an examiner's statement of reasons for allowance: The hard disk drive of claim 1 and information processing device of claim 17 that reads and writes to a discrete track medium (DTM) which includes the combination and specifics of a sector buffer memory, recording/reproducing unit and seek control unit as claimed and wherein the piece of sector data to be written is pre-associated with the sector number of the sector, the seek control unit corrects first-order run-out while permitting second and higher order run-out moving the head in a radial direction at a shift pitch smaller than the track pitch for each revolution in accordance with sector numbers of sectors where pieces of sector data are to be written within a range of tracks, and the recording/reproducing unit writes or reads in accordance with a present sector number a sector where the head is located sector data independent of the order of the sector numbers is neither taught by nor an obvious variation of the art of record. Claim 16 sets forth specifics of reading/writing to both sides of the DTM in a manner similar to that discussed with respect to claim 1 and therefor allowable for at least the same reasons provided with respect to claim 1. Also, a "DTM magnetic disk" set forth in claim 16 and 17 is limited to the defined meaning as specified in the specification as a discrete track magnetic disk.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Drouin is cited as teaching to retry to write data to a specific sector by waiting until it rotates in position again. Ehrlich teaches to write servo patterns by using a two pass per track approach. Meyer teaches to write onto different disk surfaces by using a self-servo writing technique.

### ***Information Disclosure Statement***

4. The information disclosure statement filed 4/1/08 has been considered.

### ***Drawings***

5. The drawings filed 4/1/08 are acceptable to the examiner.
