DETAILED ACTION

Claim Rejections - 35 USC § 101

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1-4 and 6-11 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. In particular, method claims 1, 6 and 8 are directed to processes that are neither **a)** tied to another statutory class (such as a particular apparatus) or **b)** transform underlying subject matter (such as an article or materials) to a different state or thing. Since neither of these conditions are met by the aforementioned claims, Examiner concludes that the methods are not patent eligible processes under 101 and are treated as directed to non-statutory subject matter (see also MPEP 2106 IV-B). Additionally, independent claims 1, 6 and 8 recite a step of "generating a signal ..." Examiner is of the opinion that the generation of a transitory feature such as a signal, does not satisfy a statutory category and therefore renders claims 1, 6 and 8 both indefinite and non-statutory (see MPEP 2106 IV-B). Claims 2-4, 7 and 9-11 are similarly rejected due to their dependency on claims 1, 6 and 8.

Allowable Subject Matter

2. Claim 5 is allowed.

Art Unit: 2882

3. The following is a statement of reasons for the indication of allowable subject matter:

4. **As per claim 5**, the examiner found no reference in the prior art that disclosed or made obvious a system for analyzing material in a voxel of a target comprising: a processor configured to determine, using an energy spectrum, an average atomic number in a voxel and is further configured to determine a mass in the target voxel using incident flux, average atomic number, energy spectrum and predetermined values of a scattering kernel and all limitations recited in independent claim 5.
