

**Proposed Amended Claim**

36. (Currently Amended) A method comprising:  
modeling a business process, wherein said modeling comprises  
designing a process, wherein  
said process represents a non-technical model of said business process,  
said designing is performed using a non-technical user interface **to permit  
design of said business process by a non-technical user**, and  
said designing further comprises  
**identifying flagging** an element, wherein  
said element is an insufficiently-defined element,  
**identifying flagging** a connector, wherein  
said connector is an insufficiently-defined connector, and  
**receiving information**, wherein said **information is configured  
to allow flagging of said element and flagging of said  
connector permit completion of** said insufficiently-  
defined element and said insufficiently-defined connector  
**to be completed**,  
in response to an indication that said process is complete, transferring access to  
said process from said non-technical user interface to a technical user  
interface **associated with a technical user, wherein  
the technical user interface is configured to be used to complete said  
insufficiently-defined element and said insufficiently-defined  
connector**, and  
implementing said process, wherein  
said implementing implements said process as a technical model of said  
business process, and  
said implementing is performed using said technical user interface **by the  
technical user**.
